

ZOOM.WTF Mac

Normal install:

1. Double-click STEP 1 - INSTALL.command.
2. Double-click STEP 2 - OPEN ZOOM.WTF.command.
3. ZOOM.WTF opens the GUI / Zoom launcher.

If macOS says STEP 1 is damaged and cannot be opened:

Open the other PDF named FIX_IF_MAC_SAYS_DAMAGED.pdf and follow it exactly.

If macOS only shows a normal warning:

Right-click STEP 1, choose Open, then approve the warning.

Notes:

- This Mac version is a launcher.
- It does not create temporary macOS users.
- Logs are kept inside this folder at logs/install.log and logs/launch.log.
